Chapter 1

Overview

Topics:

- [Map Data Version](#)
- [Highlights](#)

This document provides a summary of important changes for this version. Apart from newly resolved issues and added or improved functionality, this document also includes information about known issues remaining in this release as well as any existing limitations and workarounds.

Map Data Version

The Geocoder Autocomplete API provides weekly map data updates. Weekly map data updates are based on 2017Q4 data releases for most countries.

The following exceptions exist for countries with HERE map content coverage:

- Hong Kong and Macau are from 2017Q3 and are not updated on a weekly basis.

Entry or Intermediate map content coverage are not listed here.

Highlights

Changes have been made for GBR to return the full postal code in Autocomplete.

Chapter 2

Changes

Topics:

- [Functional and Behavioral ...](#)
- [API Changes](#)
- [Resolved Issues](#)
- [Known Issues](#)
- [Limitations and Workaround...](#)

This section documents major changes to the release that may require you to update your applications and/or associated map data.

Functional and Behavioral Changes

The following table contains descriptions of added or changed functionality and changes in product behavior.

Table 1: Functional and Behavioral Changes

#	Description
1	<p>Changes have been made for GBR to allow complete queries with full postal codes to be returned as suggestions.</p> <p>Example</p> <pre>...query=40 Chickerell Road, Swindon, SN3 2RQ</pre> <p>Result: the suggestion comes back for the query, whereas before suggestions stopped after the 4th character of the postal code.</p> <pre>... label: United Kingdom, SN3 2RQ, Swindon, Swindon, 40 Chickerell Road ...</pre>
2	<p>A new parameter has been introduced to allow filtering on postal codes for countries. This filter requires that the "&country" is provided with a 3-letter ISO code and that a new parameter "&resultType" is also provided, otherwise it will not work.</p> <p>Example</p> <pre>...query=203 &resultType=postalCode &country=DEU</pre> <p>Result: the suggestion comes back only for postal codes based on the input.</p> <pre>... label: Deutschland, 20354, Hamburg label: Deutschland, 20359, Hamburg label: Deutschland, 20357, Hamburg label: Deutschland, 20355, Hamburg ...</pre> <p>Note that this is a beta feature. We reserve the right to change this parameter in the future.</p>
